

CELESTIA CHRONOGRAPH

MONCHARD × COLLECTORS WATCH CLUB

This CwC-exclusive edition is a fully Arabic version of our popular Celestia hybrid chronograph. It's a classically styled 39 mm chronograph featuring a layered guilloche dial, a stepped case and near universal 20 mm lug width.

The watch is powered by the ubiquitous Seiko VK64 caliber. It's a mecha-quartz where the timekeeping is handled by a quartz crystal, but the chronograph is driven mechanically. This gives you a low maintenance, high accuracy timepiece that also has quite a bit of the charm of a mechanical piece.

The polished and domed lance hands catch the light and tells you the time in a sophisticated yet clear manner, while the chronograph function provides you with timing needs up to one hour.

The fully polished saucer-like caseback is custom made for you and gives room for your club logo in the middle, like a coin, while all the info and specs are given around the edges.

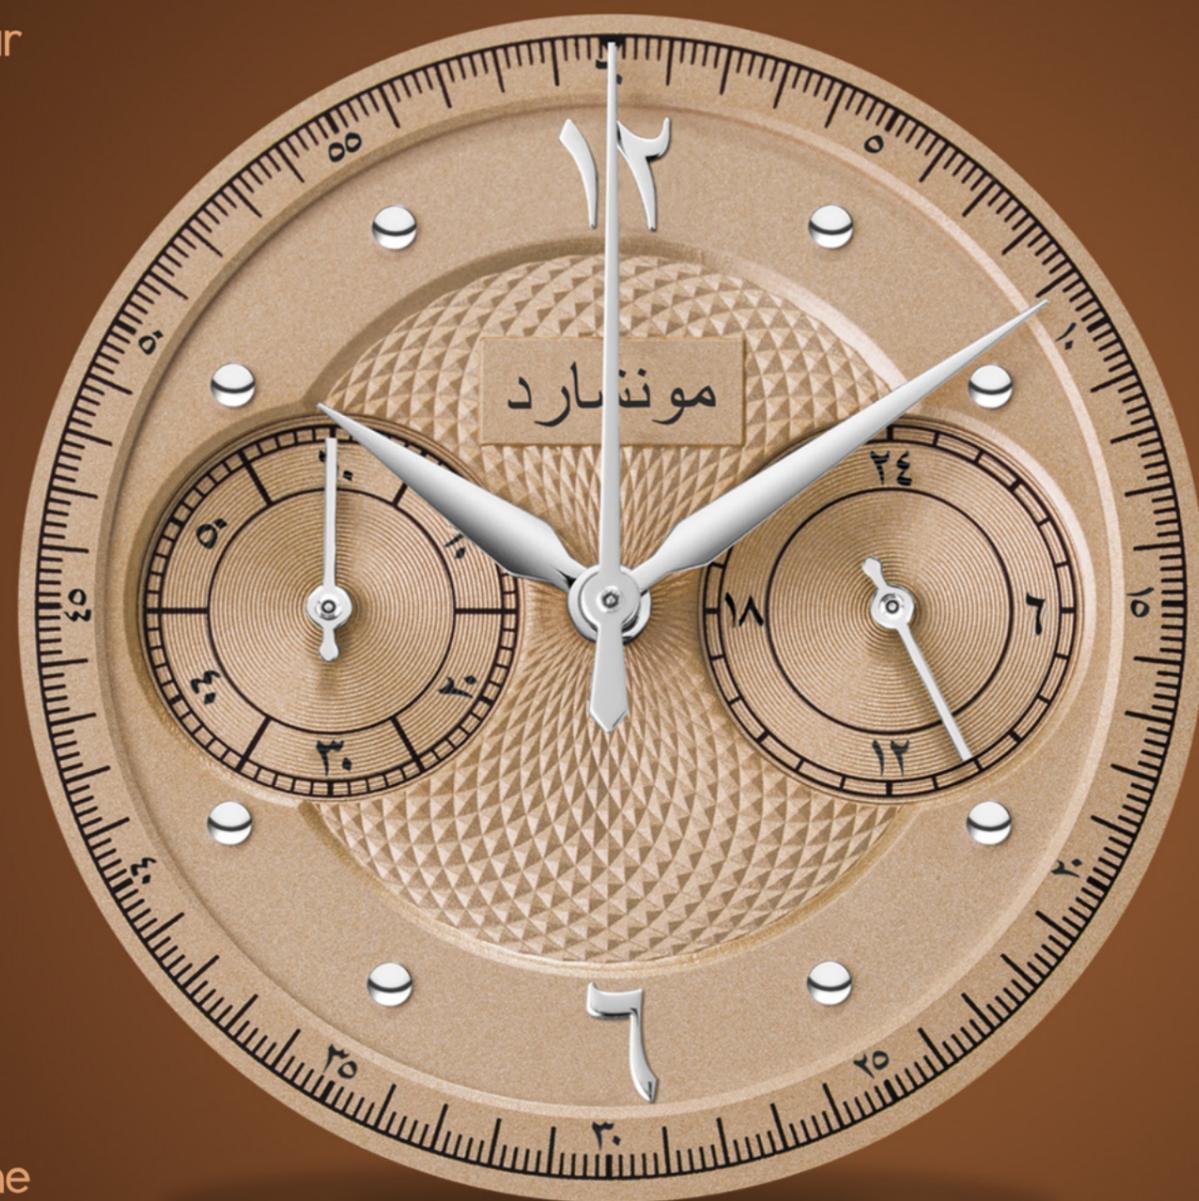

A first for us at Monchard is the fully Arabic dial, including our brand name!

We've done Arabic numerals before, but never a full dial like this. Even our brand name and the numbers on the chronograph track are done in Arabic.

The dial layout is the classic Celestia, namely a layered dial with four different layers. This creates a depth and a visually interesting and deep dial, while at the same time making the watch feel thinner.

The center piece of the golden sand colored dial is the intricate and beautiful guilloché pattern that radiates outward and meets the recessed sub dials. The chronograph track is a "seconds only-track" running on a raised flat rehaut at the edge of the dial.

The main indexes consists of mirror polished steel with the 12 and 6 being displayed in Arabic. The dial, it's layout and the elements within exudes classical charm and style.

The Celestia is a 38 mm classical chronograph housing a VK64 mecha quartz caliber. The case is a multi finished and stepped case that plays delightfully with the light and gives off feelings of chronographs from days gone by.

It's 13,8 mm thick, including the box dome style sapphire crystal.

The sides are brushed in a fine brushing and combined with the polished bezel and top of the lugs it gives off a refined look and feel.

For this collaboration we opted to develop a brand new packaging solution, giving you a more luxurious overall box and peripheral items. The watch is nesting inside a saffiano leather travel case, lined with microfiber, all of the packaging is completely newly designed and developed for this occasion.

VERSIONS (1/2)

Tan Leather

Royal blue Leather

Dark brown Leather

VERSIONS (2/2)

Brown Croco style Leather

Vintage style BOR bracelet

Brown fitted FKM rubber

SPECIFICATIONS:

CASE:

316L Stainless steel

39 mm diameter
